

**DEFINITY™ – A REVOLUTIONARY  
PROGRESSIVE LENS FROM  
JOHNSON & JOHNSON VISION CARE, INC.**

Johnson & Johnson Vision Care, Inc. has developed a unique lens designed for you to see wider and see sharper. DEFINITY™ Lenses use both sides of the lens, providing twice the surface area to optimize your prescription. This unique lens design delivers:

- The widest field of vision\*
- Least amount of distortion at the outer edges\*
- A smooth transition between distances
- Less swim that was patient-preferred over Varilux Comfort®

**DEFINITY™ LENSES HAVE A 30% WIDER FIELD OF VISION AT IN-BETWEEN DISTANCES THAN VARILUX COMFORT†**

Varilux Comfort®

DEFINITY™

**DEFINITY™ LENSES WERE PREFERRED OVER THE LEADING PROGRESSIVE LENSES, VARILUX COMFORT® AND VARILUX® PANAMIC®**

**DEFINITY™**  
PROGRESSIVE LENSES

SEE WIDER. SEE SHARPER.

**DEFINITY™**

REVOLUTIONARY NEW PROGRESSIVE LENSES

If you're over 40, you may have started noticing some changes in your vision, such as difficulty focusing on near objects and changing focus between far and near distances. That's because as your eyes age, the lens in each eye becomes less flexible. This condition is known as presbyopia. (prez-bē-'ō-pē-ə). Eventually, presbyopia can compromise your vision at in-between distances, such as when viewing a computer screen or the dashboard of your car. Each year, an estimated 4 million people are affected by presbyopia. Progressive lenses are typically recommended for those with presbyopia, but beware! Not all progressive lenses perform the same.

## WHAT DEFINITY™ LENSES MEAN TO YOU

### For progressive lens wearers or wearers of no-line bifocals

Choosing DEFINITY™ Lenses means considerably less distortion at the outer edges and a wider field of vision.

### For bifocal wearers

Making DEFINITY™ Lenses your lens of choice means less head movement. You'll no longer have to move your head up or down to avoid the disruptive lines of a bifocal lens.

### For the person new to presbyopia

Some progressive lenses require days, even weeks, before you're able to adjust to them. Because DEFINITY™ has a wider field of vision with the least amount of distortion at the outer edges of any progressive lens, you'll be able to adjust to your new lenses easier.

### For everyone in need of progressive lenses

Wearing DEFINITY™ Lenses means better vision at near, far and in-between distances. Whether you're at the computer or looking out over a landscape, DEFINITY™ provides exceptionally sharp vision.

## TAKE THE DEFINITY™ TEST

If you've started to notice some differences in your vision, take a moment to fill out the questionnaire below.

1. Do you find yourself moving the newspaper further away in order to see clearly?  
YES\_\_\_ NO\_\_\_
2. Do you experience headaches when reading?  
YES\_\_\_ NO\_\_\_
3. Do you have difficulty reading in dim light?  
YES\_\_\_ NO\_\_\_
4. Is it difficult for you to change focus between objects that are near and far away?  
YES\_\_\_ NO\_\_\_
5. If you currently wear bifocals/progressive lenses, do you suffer from eyestrain or neck pain when using the computer?  
YES\_\_\_ NO\_\_\_
6. If you currently wear bifocals/progressive lenses, do you have trouble seeing the edges of stairs?  
YES\_\_\_ NO\_\_\_

If you've answered Yes to any of these questions, you may be a candidate for DEFINITY™ Lenses. Speak with your Eye Care Professional to see if your vision can benefit from the progressive lens that helps you see wider, and see sharper: DEFINITY™ Lenses from Johnson & Johnson Vision Care, Inc. Remember: Only your Eye Care Professional can determine whether DEFINITY™ Lenses are right for you.
